INTEGRATED EARTH
DATA APPLICATIONS
iedadata.org

$$= \text{EarthChem} + \text{MARINE GEOSCIENCE DATA SYSTEM}$$

- Operate **core services of the MGDS and EarthChem** as an integrated effort
- Develop & operate **new joint system capabilities**
 - ★ To facilitate and encourage user contributions.
 - ★ To maximize integration and consistency among the MGDS and EarthChem systems

IEDA's Goals

- Promote the use of solid earth data for discovery, research, and education in the Ocean, Earth, and Polar Sciences, lower the barriers to data discovery & access.
- Preserve & facilitate the re-use of solid earth observational data, many of which are unique and expensive to acquire.
- Enable data attribution and facilitate transparency and verification of research results.
- Facilitate integration of data across the global geoscience community, both within and across scientific disciplines.
- Advance the culture of open data sharing in the Ocean, Earth, and Polar sciences.

IEDA Scope

Solid Earth Observational Data

Derived Data

Field Data

Sensor-based

Sample-based

IEDA Data Types

▣ Sensor-based (MGDS)

★ Field data: 76 data types

- E.g.: sonar ping files, seismic reflection shot data, side-scan sonar, photographs, gravity field data, temperature

★ Derived data: 69 data types

- E.g.: bathymetric grids, side-scan sonar grids, micro-seismicity catalogs, migrated seismic reflection profiles, gravity MBA grids, magnetization grids

▣ Sample-based (EarthChem)

★ Sample profiles: rocks, sediments, liquids, soils

- E.g.: collection location, sampling method, archive

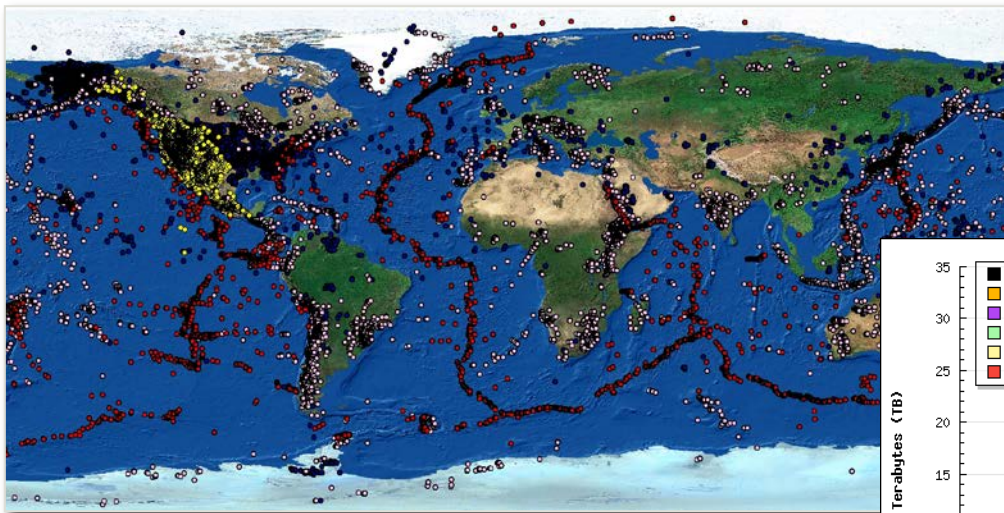

★ Analytical lab data: > 500 measured properties

- E.g.: major & trace element compositions, isotopic ratios, mineralogy, geochronology, age models, P/T model data, calculated end-member compositions

IEDA Data Holdings

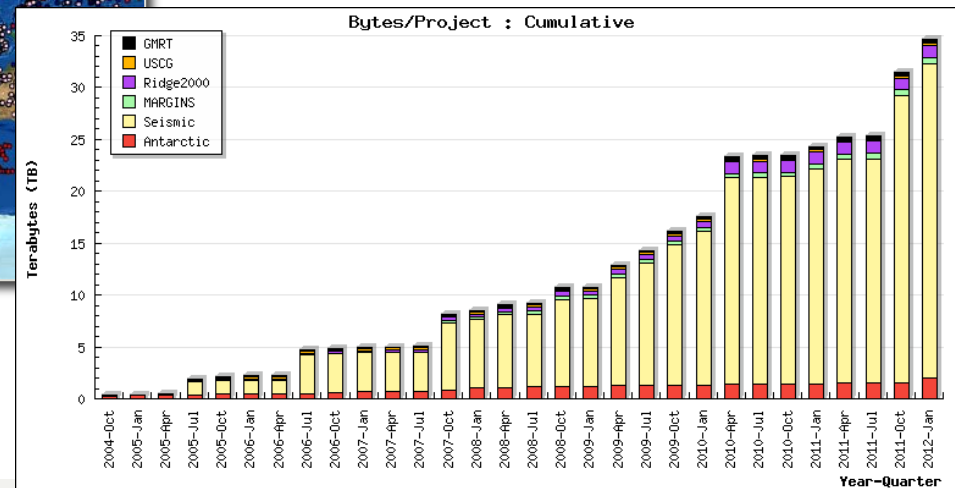

- nearly 35 terabytes, >370,000 files in **MGDS**
- 17 million geochemical values from 36,000 publications accessible at **EarthChem**
- ca. 3.8 million samples registered in **SESAR**

EarthChem Portal sample locations

Graphical Tools for Access & Integration

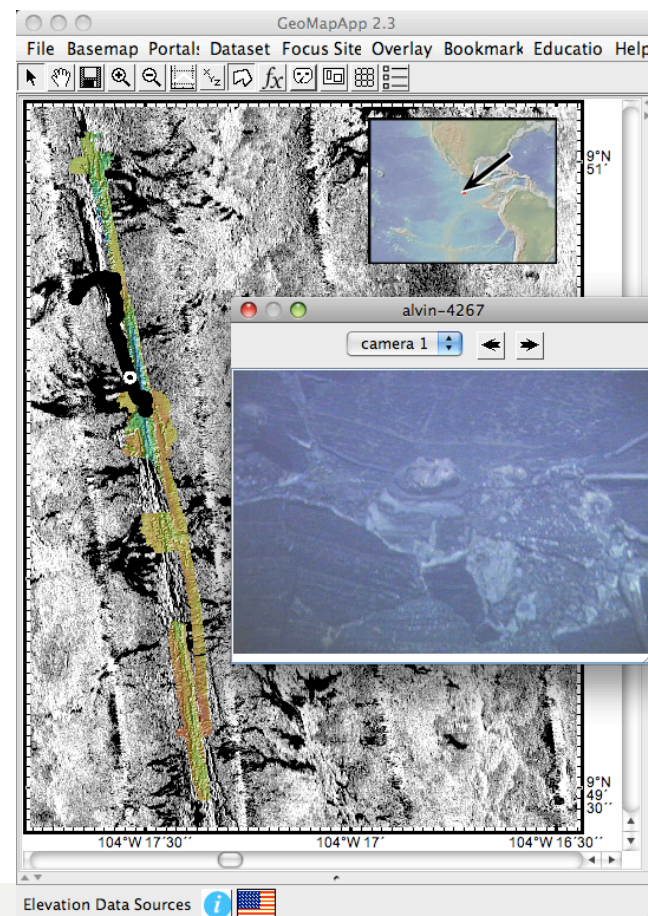

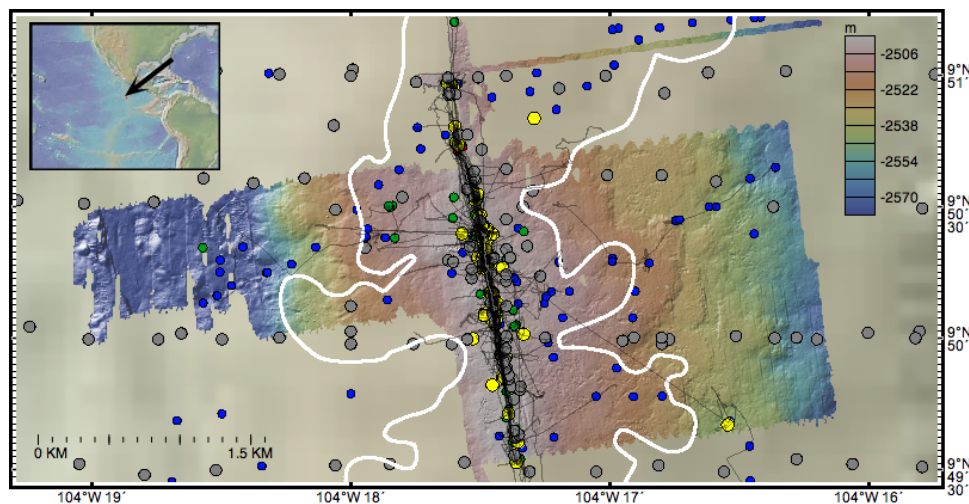

- Facilitate integration of multi-disciplinary datasets
- Provide access to complementary data from external sources
- Supports access and use of data by non-expert users

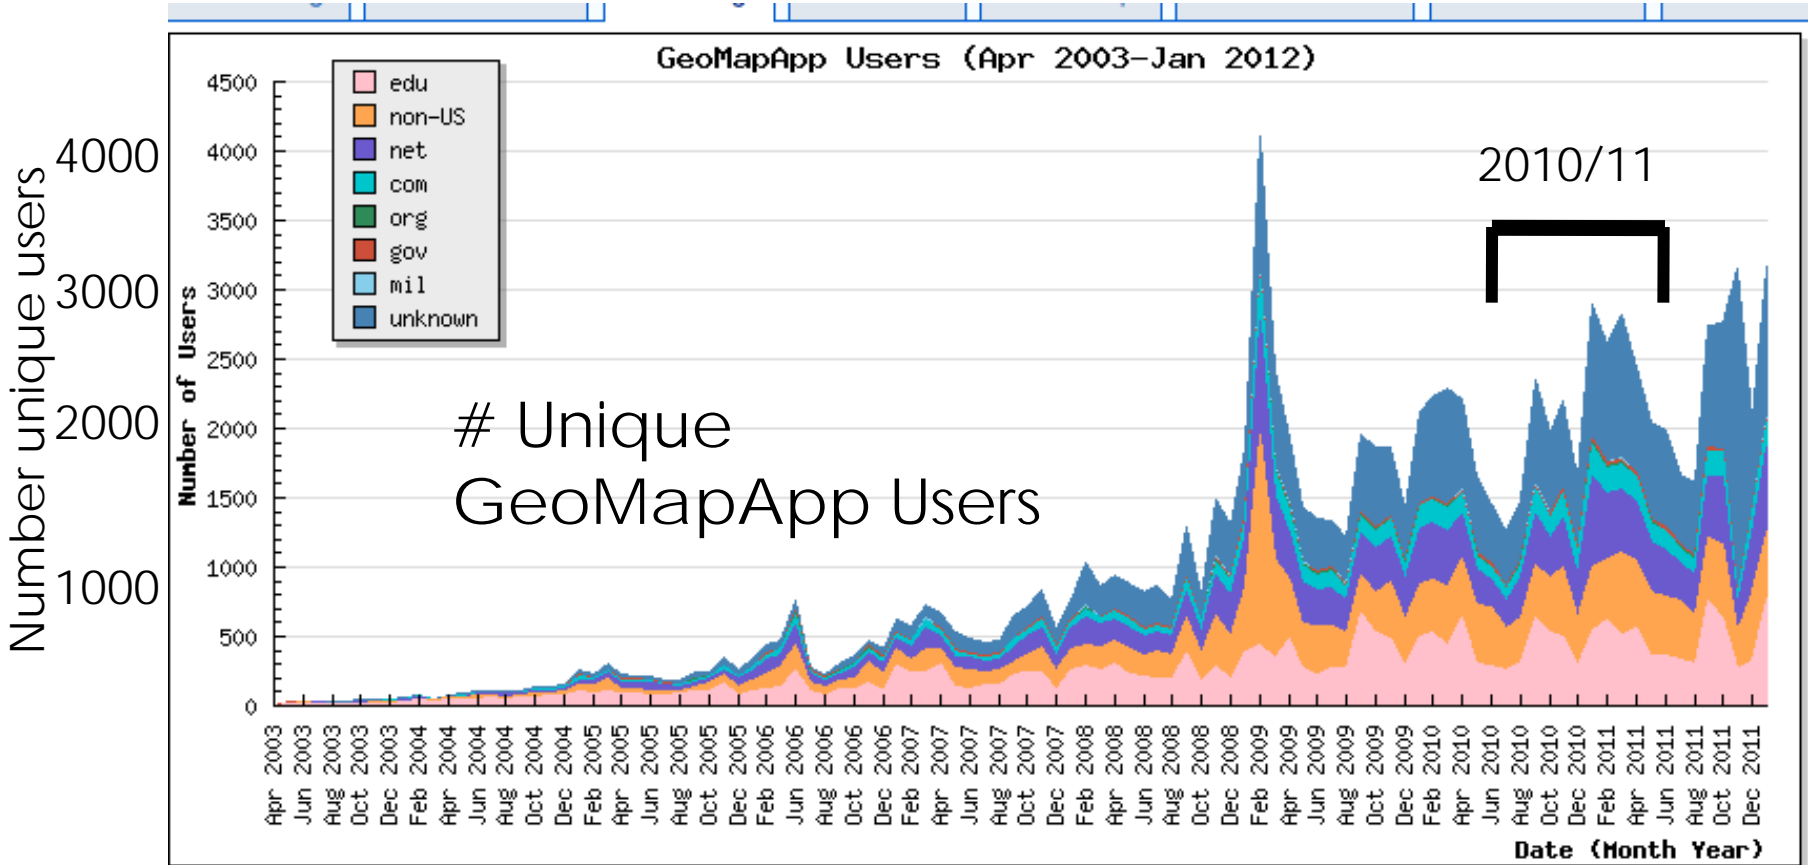

GeoMapApp

- Custom data portals and access via web services to other databases
- Analysis capability- grids, tabular data, seismic
- Import data (grids, tables, images)
- Create maps and export data

GeoMapApp ~ 2500 users/mo

Data Access

- iPad/iPhone application to access Global Multi-Resolution Topography GMRT (and many more datasets)

Isotope and trace element variations in lavas from Raivavae and Rapa, Cook–Austral islands: constraints on the nature of HIMU- and EM-mantle and the origin of mid-plate volcanism in French Polynesia
J.C Lassiter^a, J Blichert-Toft^b, E.H Hauri^c, H.G Barszczus^d

Cook–Austral chain have appealed to the existence of multiple small plumes. However, these models are implausible because they do not explain how several deep-seated plumes become aligned with each other in the direction of plate motion. We propose that volcanism along the Cook–Austral chain (and perhaps in much of French Polynesia) is generated through self-perpetuating melting anomalies that preferentially sample enriched components in a marble-cake mantle. These melting anomalies preferentially form or strengthen where lithospheric boundary conditions are favorable, such as at pre-existing transform faults or where the lithosphere has been thinned by a previous period of volcanism.

Data Synthesis

▣ Geochemical Synthesis Databases (PetDB, SedDB)

- ★ Integrate and harmonize large number of small, disparate, & heterogeneous datasets
- ★ Comprehensive data documentation (DQ, provenance)
- ★ Users can generate new customized subsets of the data
- ★ Unique data integration by sample

- ★ Revolutionized data access for igneous petrology
- ★ >400 citations in the literature
- ★ many new insights and discoveries based on mining of PetDB dataset

Data Management Plan

Primary Investigator: Vicki Ferrini

Institution: Lamont-Doherty Earth Observatory

Project: Quantitative Investigation of Submarine Lava Flow Emplacement: the East Pacific Rise 2005-06 Eruption as a Case Study

Collaborators: Eimat Lev

NSF Division: OCE

Solicitation Info: MGG

Submission Date: 02/15/2011

Overview

We will generate high-resolution bathymetry compilations of the pre- and post-eruption East Pacific Rise (9N) using existing data. These will be used to produce bathymetric change maps, and will be the basis of our proposed modeling efforts. Simulation code will be made available.

Data description

We will make use of existing bathymetry data collected with submersibles and ships operating at the EPR over the past decade.

Description of present data and samples

Data that will be used are available from the Ridge 2000 Data Portal (<http://www.marine-geo.org/portals/ridge2000>).

Data analysis summary

Existing bathymetry data (grids, and non-reduced data) will be assembled, tide-corrected and referenced to a common datum to enable bathymetric change analysis. The bathymetric compilations we assemble will be the basis of our eruption simulations.

Includes field work? No

Description of field work

Please provide details about your field work strategy, for example: duration, deployments, instrumentation

Expected data product #1

Data type: Observational

Responsible investigator: Ferrini

Product description

Tide-corrected, well-constrained pre- and post-eruption bathymetry grids

Intended repository: R2K Portal

Timeline for data release: End of grant period

Expected data product #2

Data type: Observational

Responsible investigator: Ferrini

Product description

Bathymetric change grids and profiles documenting the effects of the 2005/06 eruption at EPR

Intended repository: R2K Portal

Timeline for data release: End of grant period

Expected data product #3

Data type: Model

Responsible investigator: Lev

Product description

Numerical simulation codes for modeling submarine volcanic eruptions.

Preservation plan

VHUB (<http://vhub.org>) - Collaborative volcano research and risk mitigation. This is an NSF-supported portal for volcano-related data and modeling code.
