Limited Observations
Low-Res Models (LFM; ~190 km)
Lousy Forecasts
Lots of Pain and Suffering

Early 1980s

Proto Meteorologist

Limited Observations
Lousy Models (LFM; ~190 km)
Lacking Forecasts
Lots of Pain and Suffering

Early 1980s (1983)

Proto Unidata

Workshop held at University of Wisconsin with ~80 US meteorology and atmospheric sciences departments sending representatives

Name “Unidata” (university and data) coined

Recommended that UCAR establish and govern Unidata to provide:

- 1. Access to current and archived wx data, sat imagery, forecasts**
- 2. Support interactive computer capabilities at universities**
- 3. Communications capabilities between universities, NCAR, & NASA**

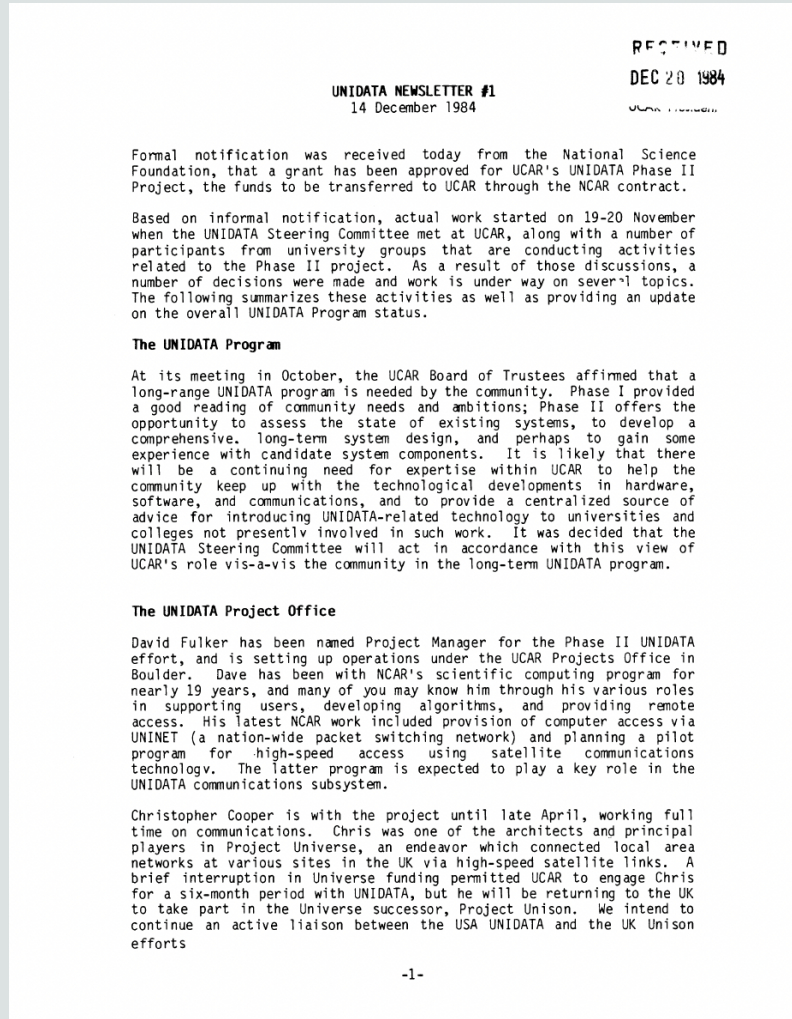

1984

Neo Unidata

“Formal notification was received today from the National Science Foundation, that a grant has been approved for UCAR’s UNIDATA Phase II Project”

“David Fulker has been named Project Manager”

David Fulker

1984

Neo Unidata

“To ensure the strongest possible relationship between the Unidata Project office and the academic community, a Management Advisory Committee has been established comprising: ”

**John Dutton (Penn State, PI)
Vernon Suomi (Wisconsin, PI)
Richard Orville (SUNY Albany)
Robert Wilhelmson (Illinois)**

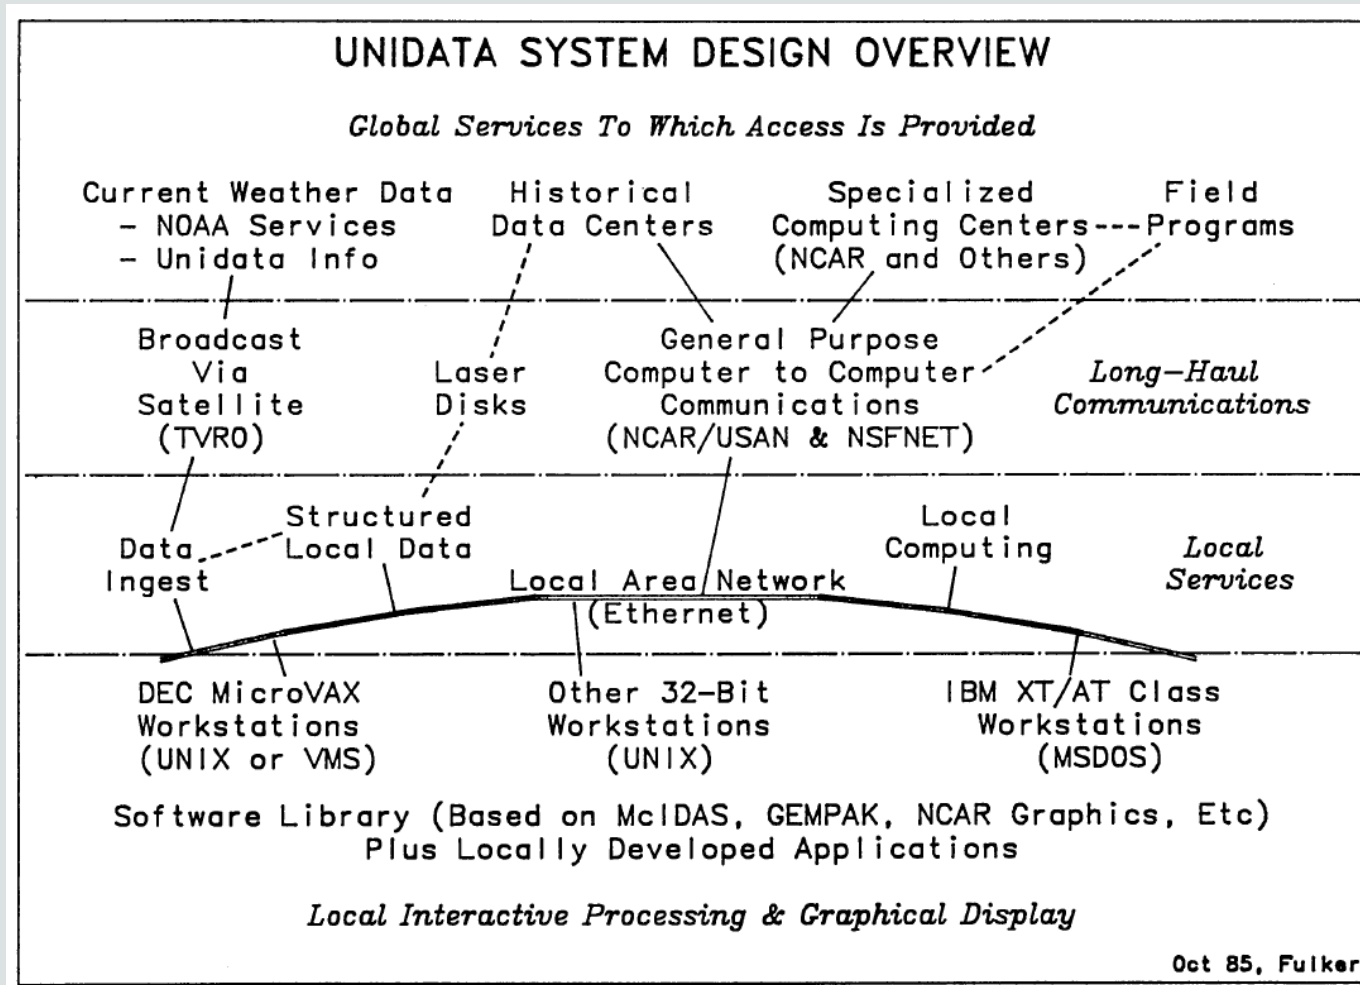

And four chairs of the Phase II working groups:

**Clifford Mass (Washington, Data Sources)
Earnest Agee (Purdue, Local Hardware/Software)
Christopher Cooper (Rutherford Appleton Lab, Comms)
David Fulker (UCAR, Local Data Management, Temporary)**

1985

Neo Unidata

Global data access

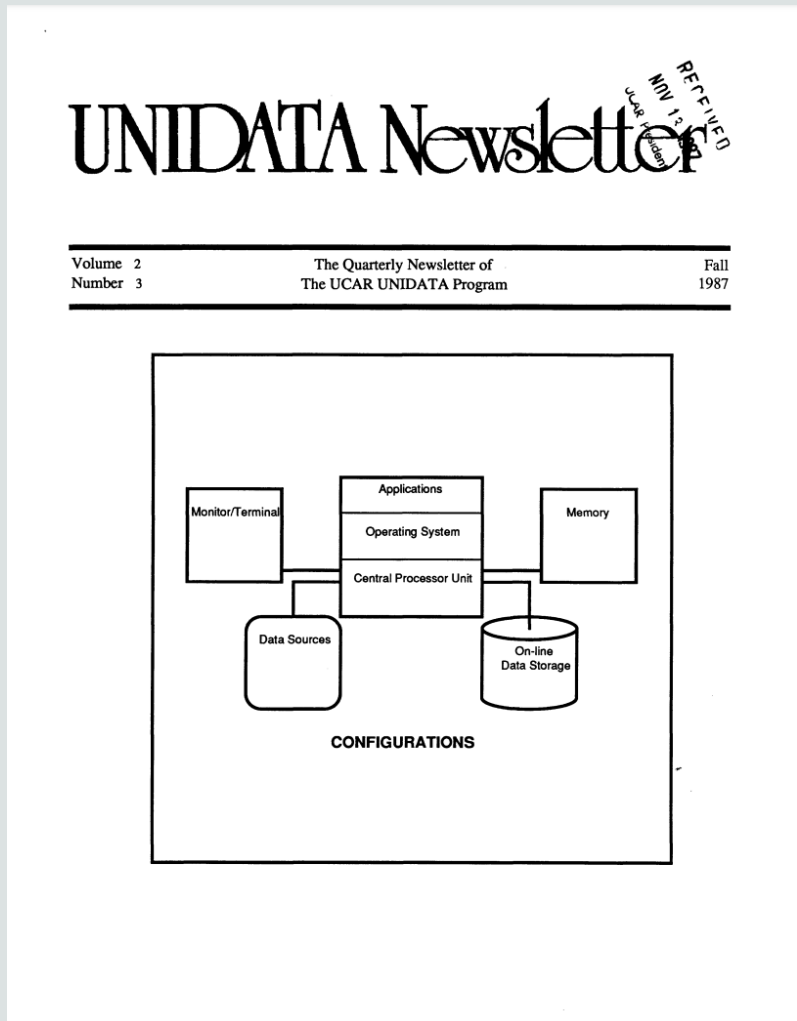

Long-Haul Communications

Local Services

Local interactive processing & Graphical Display

1987

Neo Unidata

“Six test sites demonstrated the useability of PC-McIDAS”

**“Successful testing of our prototype
local data manager (LDM)”**

**“Unidata will be testing and evaluating a working
CDF [Common Data Format] system in early December”**

“MSDOS, UNIX, or VMS? The Choice is Yours”

Unidata Summer Workshop (one example of many)

MODELS AS EDUCATIONAL TOOLS

BY LEIGH ORF, GARY LACKMANN, CHRIS HERBSTER, ANTON KRUEGER, ELEN CUTRIM, TOM WHITAKER, JIM STEENBURGH, AND MICHAEL VOSS

This past summer, Unidata hosted “Expanding the Use of Models as Educational Tools in the Atmospheric and Related Sciences,” as its summer workshop. Meteorology faculty, researchers, and model developers presented an array of educational and instructional sessions showcasing real-world modeling applications that would be useful in the classroom. More than 80 people attended the workshop, which consisted of 20 different presentations spanning topics from simple Web applets and their use in introductory meteorology courses to the ambitious goals of the Linked Environments for Atmospheric Discovery (LEAD) project, which allows Web-based submission, execution, and analysis of real-time numerical weather prediction (NWP) models. Based on comments and exit surveys from

WORKSHOP ON EXPANDING THE USE OF MODELS AS EDUCATIONAL TOOLS IN THE ATMOSPHERIC AND RELATED SCIENCES

WHAT: More than 80 educators attended Unidata’s summer workshop to learn practical exercises involving models that could be incorporated into their own meteorology courses.

WHEN: 10–14 July 2006

WHERE: Boulder, Colorado

attendees and presenters alike, the workshop was very well received; several people suggested that this was one of the most successful Unidata user workshops to date.

“We must pool our resources and share our software, methodology, and presentations so that others may be able to include them in their own classes”

Neo MetPy

“MetPy is an Open Source project aimed at providing a Pythonic library for meteorological data analysis that meshes well with the rest of the scientific Python ecosystem”

MetPy: An Open Source Python Toolkit for Meteorology

28 May 2015

MetPy Skew-T plot (click to enlarge)

MetPy is an Open Source project aimed at providing a Pythonic library for meteorological data analysis that meshes well with the rest of the scientific Python ecosystem. The project heavily leverages the work already done by the Numpy, Scipy, and Matplotlib projects, and adds on top functionality specific to meteorology: plotting (e.g. Skew-Ts), calculations, and reading files (e.g. WSR-88D NIDS files).

The MetPy project began at the University of Oklahoma when then-graduate students Ryan May and Sean Arms (now Unidata Program Center software developers), together with fellow graduate students Patrick Marsh and Eric Bruning, thought it would be a good way to

avoid working on their doctoral theses. After years of dormancy due to said theses, work on MetPy has recently resumed.

While MetPy is not an official project of the Unidata Program Center, May and Arms are both heavily involved. Participation by Unidata community members — anything from trying the code and [providing feedback](#) to contributing code — is heartily encouraged.

How to Get Involved

The MetPy project is on Github at github.com/metpy/MetPy. Check there for information on grabbing the source and project dependencies. You can also [read the documentation online](#).

Fifty Years of Unidata and Me?

- I hope so
- Unidata must transform more in the next 10 years than the previous 40
 - So must higher ed, but there are tremendous opportunities!
 - What must not change is maintaining the “***strongest possible relationship between the Unidata Project Office and the academic community***”
- Let's do this together!
